SOME WORDS ABOUT ME

A decade ago, I graduated with a Masters in Computer Applications and a zeal to learn. I spent many years honing my craft as a full stack PHP developer in agency paced environments. I recently upskilled in the latest web technologies and practices though General Assembly. I'm looking to apply my new found skills to solve hard problems eloquently and convert client requirements into exciting web applications using the best tool for the job.

SKILLS

- Ruby on Rails, NodeJS, PHP
- JavaScript, jQuery, AJAX, ReactJS, VueJS, MeteorJS
- SQL, MySQL, PostgreSQL, MongoDB
- HTML5, HAML
- CSS 3, Bootstrap, SASS
- Command Line Interface, API Integration
- Agile Methodologies, Test Driven Development
- Version Control: Git

RECENT PROJECTS

Tic-Tac-Toe (Individual): Created a Pinterest like website with Ruby on Rails that
- enabled users to signup/login
- enabled them to enter a URL
- fetched images from that URL for user selection
- enabled users to upload images to pin
- enabled users to enter URL for an image and pin it
- enabled users to create pins and boards

Burning Airlines (Group): Created a website with ReactJS front-end and Ruby on Rails back-end where
- users could look up for flights from a source to a destination
- book for a flight of their choice
- select seats of their choice
- display booking confirmation

Airbnb (Group): Created an Airbnb like website with ReactJS front-end and Ruby-on-Rails back-end but for amenities where
- users could look up for an amenity based on suburb and kind of amenity
- choose the duration and starting time
- owners could create new amenities or delete them
- admin could manage, locations, amenities, bookings and users

Shopping Mate (Individual): Created a website with ReactJS front-end and NodeJS back for shopping needs which included
- scanning the barcode and fetching data using an API
- using the saved details to create Shopping lists
- sharing the shopping lists with friends/family to facilitate shopping
- entering purchasing data (like store and price) to enable price comparisons and expense management

PROFESSIONAL EXPERIENCE

Web Developer (Contract)

Espire Infolabs, North Sydney| 05/2018 – 06/2018
- Migrated 60+ applications on a PHP 5.3 server to a PHP 7.1 server for the client on a client-facing job

Senior Web Developer

Cyber Height Technologies, India | 08/2014 – 02/2015
- Worked with a small close-knit team designing, building and maintaining bespoke PHP based projects.

Senior Web Developer (Contract)

TB Infotech, India| 06/2014 – 08/2014
- Designed and built a Magento (PHP) based website which included theme implementation and minor tweaks to the extensions

PHP Developer

Cyber Height Technologies, India | 12/2013 – 5/2014
- Startup company with a small team and various projects including front-end, back-end and full websites from scratch

Software Engineer

Live Deftsoft Informatics | 03/2013 – 12/2013
- Agency work included website building and maintenance for various clients using various tech stacks
- Part of the core team which handled all the complex Magento based projects
- Pride Project – implemented a custom theme to a complex internal website. Refactored the code for the UI, as it was originally in single file.

Web Developer

Ascent Keyboardlabs, India | 05/2012 – 02/2013
- Worked with a small close-knit team designing, building and maintaining bespoke PHP based projects.

Trainee Web Developer

Designer X | 05/2011 – 04/2012
